SUMMARY

Data analyst with an Honours B.A. in Computer Science & Economics from McMaster University (Canada), Microsoft Certified Power BI Data Analyst (PL-300) and Databricks Certified Data Engineer Associate. Uses SQL, Python, Power BI and Spark to clean and model data, test hypotheses, forecast trends and communicate actionable findings.

CERTIFICATIONS

Databricks Certified Data Engineer Associate | Databricks — Nov 2026
Credential ID: 200257707

Microsoft Certified: Power BI Data Analyst Associate (PL-300) | Microsoft — Oct 2026
Credential ID: 3D271C51B2C085A1

TECHNICAL SKILLS

SQL (joins, CTEs, window functions) · Python (pandas, scikit-learn, statsmodels) · Power BI (DAX, data modelling, dashboards) · Databricks (Spark SQL, PySpark, Delta Lake) · Excel · Tableau · Statistics (A/B testing, regression, hypothesis testing, forecasting) · ETL · Data validation · KPI reporting · Data visualization · Git

SELECTED DATA ANALYTICS PROJECTS

UPI vs. Cash: India's cash demand — SQL · Python · Forecasting

- Built an ETL pipeline, 7 SQL data models and 15 automated data-quality checks using RBI and World Bank data.
- Found cash holdings near 12% of GDP while UPI's share grew from 37% to 91% of GDP; a Holt-Winters forecast (1.1% average error over a 25-period backtest) projects ₹48.1 lakh crore by May 2027, so banks should plan for more cash, not less.

Mobile Game A/B Test: experiment integrity — Python · SQL · A/B Testing

- Analysed a 90,189-player experiment; sample-ratio and A/A checks identified 823 excess low-activity users in one group ($p = 0.0005$), which more than halved the true retention effect once corrected.
- Built a reusable statistics toolkit with 13 unit tests and recommended rerunning with 2.4× the sample.

Customer Churn: profit-based targeting — Python · scikit-learn · SQL

- Built and cross-validated churn models (AUC 0.84) on 7,043 customers.
- Replaced a default 50% cutoff with expected-profit targeting, raising simulated campaign profit from $85k to $92k and winning in all 30 cost scenarios.

Delhi Air Pollution: source attribution — Python · Statistics · Machine Learning

- Combined 600,000+ NASA fire records with five years of air-quality and weather data.
- Built a cross-validated weather-normalization model estimating ~60% of early-November PM2.5 was associated with crop-fire smoke.

Additional projects: Toronto subway delays (267,571 incident records) · Express Entry draw forecasting (448 IRCC draws) · Moneyball IPL (290,000+ ball-by-ball records) · GitHub: github.com/BoredMongoose

EDUCATION

Honours B.A., Computer Science & Economics | McMaster University, Hamilton, Ontario, Canada — Nov 2023
Dean's Honour List (2019)

EXPERIENCE

Customer Service Representative, Domino's Pizza | Hamilton, Ontario — Apr 2023 – Aug 2023

- Handled high-volume orders and customer inquiries accurately in a fast-paced team.
- Trained 7 new team members on store operations, policies and service standards.
