SUMMARY

Detail-oriented data analyst with an Honours B.A. in Computer Science & Economics (McMaster University, Dean's Honour List). With strong analytical and problem-solving skills, I turn large datasets into actionable insights: writing SQL and Python for data cleaning, ETL and statistical analysis, building dashboards and KPI reporting in Power BI, and communicating findings clearly to technical and non-technical stakeholders. Every analysis I ship includes data-quality and validation checks.

EDUCATION

Honours B.A., Computer Science & Economics, McMaster University
Dean's Honour List (2019)

Hamilton, ON · Nov 2023

TECHNICAL SKILLS

Core: SQL (joins, CTEs, window functions, aggregations) · Python (pandas) · Power BI (DAX, data modelling, dashboards) · Excel · statistics (regression, hypothesis testing, forecasting)

Also used: statsmodels, scikit-learn, Tableau, DuckDB, matplotlib, Jupyter, REST APIs, Git & GitHub

Practices: data cleaning, ETL / data pipelines, data validation and quality checks, KPI reporting, trend analysis, data visualization, data storytelling, documentation

DATA ANALYTICS PROJECTS

UPI vs. Cash: why India still holds record cash

SQL · Python · Power BI · Forecasting

- Built an ETL pipeline and 7 SQL data models (DuckDB) over RBI and World Bank financial data, with 15 automated data-quality checks that stop the pipeline when a reconciliation fails.
- Trend analysis found cash has held near 12% of GDP since before UPI, while UPI grew from 37% to 91% of GDP in four years: UPI replaced cash for payments, not for savings.
- Forecast monthly cash demand with Holt-Winters (1.1% average error in a 25-period rolling backtest) and designed a Power BI dashboard with DAX time-intelligence KPIs.

Delhi Air Pollution: Diwali vs. crop-fire smoke

Python · Statistics · Machine Learning

- Integrated 600,000+ NASA satellite fire records, 5 years of air-quality data and hourly weather data from APIs into one analysis-ready dataset.
- Ran a placebo test that exposed a misleading regression, then built a cross-validated weather-normalization model (regression vs. gradient boosting) to isolate smoke from weather.
- Estimated crop-fire smoke at ~60% of early-November PM2.5 and Diwali at ~2% of the season's excess; documented methods, robustness checks and limitations for a non-technical audience.

Moneyball IPL: auction price vs. on-field value

SQL · Python · pandas

- Designed a "runs added" KPI in SQL from 290,000+ ball-by-ball records using window functions and league baselines; validated it against team win rates ($r = 0.73$).
- Cleaned and matched 226 auction prices to scorecard names (exact, alias and fuzzy matching), and traced a NULL-handling bug to its root cause through a reconciliation check.
- Showed price explained only ~10% of player impact and 36% of budget signings never played; presented findings with ranked charts of the best and worst buys.

Additional projects

github.com/BoredMongoose

- Global Terrorism Database EDA** (Python, pandas, matplotlib): EDA of 181,691 records: data cleaning, data-quality checks, trend and correlation analysis, geospatial visualization.
- Workforce diversity segmentation** (Python, scikit-learn): data validation, K-Means clustering and PCA to segment 110 industries, diversity scoring.
- Power BI dashboards:** mental health (5,000 employees), UFO sightings, medicine lookup: KPI cards, slicers, maps, published to Power BI Service.
- AI SQL query generator** (JavaScript, React, Node.js, OpenAI API): converts natural-language questions into SQL.

EXPERIENCE

Customer Service Representative, Domino's Pizza

Hamilton, ON · Apr 2023 – Aug 2023

- Handled high-volume orders and customer inquiries accurately against tight deadlines, collaborating closely with a fast-paced team.
- Trained 7 new team members on store operations, policies and service standards.
